Education

National University of Computer & Emerging Sciences FAST

August 2022 – June 2026

Bachelor of Science in Computer Science

Islamabad, Pakistan

Relevant Coursework

- Artificial Intelligence
- Information Security
- Computer Vision
- Ethical Hacking

Experience

NESCOM CENTech

June 2026 – August 2026

Intern

Islamabad, Pakistan

- Developed a six-format malware detector (Win32, Win64, .NET, ELF, PDF, APK) using calibrated ensembles of XGBoost, LightGBM, and Random Forest, trained across three datasets from three different papers (EMBER2018, BODMAS, EMBER2024).
- Developed Python tooling to validate the model on 3,200+ real malware samples from MalwareBazaar and 2,000+ benign files from clean GitHub repositories and system binaries, tracing the 30-point gap between benchmark (96%) and real-world accuracy to a code-signing confound in the training data.
- Integrated the detector into Wazuh (open-source SIEM) with a 5,029-rule YARA Forge Core package for malware-family attribution, cutting time-to-verdict on a monitored endpoint to 277 ms against a 36-second VirusTotal reputation-lookup baseline.
- Configured an OPNsense firewall (GeoIP and domain filtering) and an automated n8n workflow that logs Wazuh alerts and sends alert as a detailed message to an analyst's Discord channel.

Projects

SafeRideAI (FYP) | Python, YOLOv8, CNNs, FastAPI, Docker

August 2025 – May 2026

- Built a 3-stage computer-vision pipeline (YOLOv8 vehicle detection then CNN safe/unsafe binary classifier then license-plate detection and then OCR with FastOCR and Easyocr and tuned for Pakistani plates) to flag unsafe overcrowding from live video feed for 3 types of vehicles: Bus, Suzuki, and Chingchi.
- Created the first annotated dataset of Pakistani public-transport safety scenes: 3,700+ images hand-labelled and some auto-labelled through model with human in the loop, data annotation in CVAT.
- Reached 85%+ detection at 15+ FPS. Deployed with FastAPI, MongoDB, JWT auth, and a Flutter dashboard.

Responsible Disclosure, Live Institutional Web Portal | Web Pentesting, OSINT, Burp Suite

April 2026

- Chained a critical vulnerability on a live portal: rebuilt full source code from an exposed .git directory (git-dumper) and identified an unrestricted file-upload path to RCE.
- Recovered hardcoded root MySQL credentials and active third-party API keys from plaintext config files found in source code.
- Wrote a full disclosure report with a non-destructive proof-of-concept, supporting evidence, and remediation steps, submitted to the institution's IT leadership.

Custom C2 / RAT Framework | Python, C/C++

October 2025 – December 2025

- Built a client-server command-and-control framework to study social-engineering attack surfaces and endpoint evasion, for a university Information Security course.
- Implemented a multi-threaded C2 server, an in-memory keylogger, and a payload delivery chain, strictly only for coursework and defensive research.

Research

Anwar, H., Khan, H., Khan, M., & **Aamir, M. A.** (In Preparation). *SafeRide AI: Image-based real-time vehicle unsafe passenger behaviour detection using deep learning.*

Tahir, M., & **Aamir, M. A.** (In Progress). *Synthetic data generation using large language models (LLMs) vs. traditional methods (SMOTE).*

Technical Skills

Languages: Python, C/C++, PHP, JavaScript, Bash, SQL

Security/ML: Wazuh (SIEM), YARA, OPNsense, Nmap, Burp Suite, Metasploit, PyTorch, scikit-learn

Tools/Infra: Linux, FastAPI, MySQL, MongoDB, Docker, AWS, Git, n8n, WordPress

Leadership / Extracurricular

Social Media Lead, GDG On Campus FAST, grew organic reach 603% to 100K+ monthly views.
